CSCI3170 Sales System

readme style `standard`

This is a simple sales system for a computer part store to manage the employees, transactions, and inventories.

The system is implemented in Java and SQL. In order to implement the system, you need to have access to CUHK CSE Server or other servers that support Java and SQL. It contains database ER diagrams, Database schema, and Java source code.

Group members:

Table of Contents

Install

1. Get access to CUHK CSE Server or other servers that support Java and SQL.

2. Clone the repository to your server by using the following command:

```
git clone https://github.com/Gavin-OP/csci3170_group_project_sales_system.git
```

3. Go to the repository folder by using the following command:

```
cd csci3170_group_project_sales_system/phase2_code_implementation
```

Usage

1. Remove existing class files by using the following command:

```
rm -rf *.class
```

2. Compile the Java files by using the following command:

```
1   javac Main.java
```

3. Run the program by using the following command:

```
1   java -classpath ./mysql-jdbc.jar:./ Main
```

4. Follow the instructions on the screen to use the system.

   - For the sample source data folder, please refer to the folder `sample_data`.
   - In the `sample_data`, there are 5 files:
     - `category.txt`
     - `manufacturer.txt`
     - `part.txt`
     - `salesperson.txt`
     - `transaction.txt`
